SUMMARY

MS Computer Science student with experience in Backend Development, Distributed System, and AI/ML Applications

EDUCATION

University of Massachusetts Amherst

Master in Computer Sciences

Sep 2025 - Dec 2026

Bachelor of Science in Computer Sciences and Mathematics

Sep 2021 - May 2025

GPA: 3.9, *Dean's List* (4 years), *Chancellor's Award*, *Cum Laude*

SKILLS

Languages: Golang, Java, Python, JavaScript, HTML5, CSS3, C/C++, PostgreSQL/MySQL, Swift, Dart

Tools: Azure, AWS, GoFiber, Gin, Spring Boot, Django, Linux/Unix, Docker, Redis, RabbitMQ, MongoDB, GraphQL, gRPC, Bazel, ReactJS, NodeJs, Flutter, Tailwind CSS, Pytorch, Tensorflow, Sklearn, Git, Jenkins, Bazel, Terraform, Figma

Certifications: Kubernetes Google Cloud Architecture, Deploy and Manage Google Cloud Spanner, Google VertexAI

EXPERIENCE

Box, Inc.

Redwood City, CA

Software Engineer Intern - Data Platform

June 2026 – Current

- Building scalable backend tooling and tenant workflows for petabyte-scale data infrastructure on GCP

Google

New York, NY

Software Engineer Program (G-SWEP) Fellow

July 2025 – Oct 2025

- Outperformed **400+ applicants** to participate in a highly selective 10-week virtual BASTA x G-SWEP Program
- Led a team of 4 to design SDLC workflows, ideate solutions, and present a prototype for the last-mile transit challenge to Google engineers

Jack Applies

Miami, FL

Software Engineer Intern - Job Platform Developer

May 2025 – Aug 2025

- Architected and developed a scalable resume generation service using **AWS** and **Azure OpenAI API** serving **25,000 daily** US job seeker, reducing average resume generation time by 80%
- Designed an event-driven resume-processing pipeline using **AWS SQS**, **Lambda**, **S3**, with an **MCP/Skyvern** execution layer, eliminating cron-triggered race conditions and ensuring ordered execution for **200+ concurrent jobs**
- Automated CI/CD pipeline with **Github Actions**, bash scripts and integrated **unit testing** to deploy to **AWS EC2**
- Improved resume content generation using **LangChain** prompt chaining, improving beta-user satisfaction by 50%, with built-in log and error analytic using **AWS CloudWatch** and **AWS SNS**

FPT Software

Hanoi, VN

Software Engineer Intern - Web Developer

Jun 2023 - Sep 2023

- Built synchronization infrastructure for a nationwide pharmacy platform by implementing a custom **Pub/Sub** architecture and reusable **JavaScript SDK** to maintain consistency across 20,000+ inventory records
- Improved sprint delivery consistency by following **Agile-Scrum** methodologies with Japanese development team, using **Jira** workflows to maintain clear communication and prevent task conflicts

PROJECT

PeerBazaar

Technology: Golang, TCP Sockets, Multiprocessing, Threading

- Developed a **Linux-based** decentralized **P2P file-sharing** protocol in **Go** inspired by early systems like Gnutella, implementing TTL-based query flooding, reverse-path routing, and duplicate suppression via request IDs
- Utilize **goroutine** to handle 1000+ concurrent **TCP** connections, enabling parallel lookup flooding, reply routing, and peer transactions without **OS thread** overhead

BeatCode

Technology: FastAPI, PostgreSQL, OpenAI, Claude Code, Docker, Bash, Protobuf API, NGINX, TCP/IP

- Launched a Leetcode battle platform using FastAPI and PostgreSQL, attracting **1000+** users in 12 hours of launch
- Enable real-time gameplay for **300+** concurrent game rooms by integrating WebSocket with Protobuf APIs for low-latency client-server communication

ACHIEVEMENT

1st Place hackathon at University of Rochester (200+ participants)

Nov 2025

2nd Place hackathon at UMass Amherst (1000+ participants)

Nov 2024

2nd Place Collegiate Chess Tournament - Elo 2100 (Top 0.3% Worldwide)

2021 - Present
